DC Inverter heat pumps Gorenje Product information

Model: Aerogor POWER EVI Inverter 15 AS

Type: air-water (split system)

English language

*Symbolic picture.

Article code: 671443/671444 (Outdoor unit/Indoor unit)

TECHNICAL SPECIFICATION: Heat pump air-water Aerogor POWER EVI Inverter 15 AS

MODEL	Unit	Aerogor POWER EVI Inverter 15 AS
ErP Energy efficiency class (floor/radiator heating)		A+ / A+
SCOP 35°C (floor heating) EN 14825	kW/kW	3,46
P _{design} for SCOP EN 14825	kW	10,97
Heating capacity* at A2/W35 (EN 14511):	kW	10,53
COP* (Coefficient of performance) at A2/W35 (EN 14511):	kW/kW	3,7
Heating capacity* at A7/W35 (EN 14511):	kW	14,50
COP* (Coefficient of performance) at A7/W35 (EN 14511):	kW/kW	4,1
*At 95-100% or 75/85 Hz of max. compressor frequency. Maximum cor	1	
Heating mode (A7/W35)**; According to EN 14511.		
Heating capacity**	kW	5,96 - 14,50
Rated input power**	kW	1,44 - 3,44
COP - Coefficient of Performance**	kW/kW	3,97 - 4,46
Cooling mode (A35/W7)***; According to EN 14511.		
Cooling capacity***	kW	5,56 - 10,00
Rated input power***	kW	1,57 - 3,82
EER - Energy Efficiency Ratio***	kW/kW	1,85 - 3,52
Voltage	V/Hz/Ph	380-415/50/3
Type of compressor	/	Scroll EVI DC Inverter
Max. temperature of heating water	°C	55
Operating range - source temp. in: heating/coooling mode	°C	-25°C to +45°C / 0°C to +65°C
Refrigerant specification		
Type of refrigerant/Refrigerant - mass (factory pre-charged)	type/kg	R410A/6,2
Type of connection/max. distance between outdoor-indoor unit		
(see details on page 7)	/	Refrigerant connection / 30 m
Dimensions of refrigerant pipes connectors	, Liquid - Gas	3/8" - 3/4"
Fan		
Fan type	/	Axial
Air flow	, m³/h	4200
Rated power	W	2 x 80
Water side heat exchanger		
Туре	/	Plate heat exchanger
Pressure drop	, kPa	35
Dimensions of water piping connection	Inch	G1"
Allowable flow - secondary (water) side		
Min. / Nonimal / Max. water flow	m3/h	1,4/2,56/2,7
Net dimensions		
Indoor unit (WxHxD) (see details on page 6)	mm	512 x 932 x 303,5
Outdoor unit (WxHxD) (see details on page 6)	mm	1241 x 1195 x 460
Net weight		
Indoor unit/Oudoor unit	kg	47/151
SERIAL INTEGRATED COMPONENTS		
Electrical flow heater	kW/ph	6 kW (3ph / 2 stages)
Circulation water pump - A energy class	type	Grundfos UPM GEO 25-85 180
3-way diverting valve for DHW tank		External (in delivery)
Fuse for heat pump	A/type	1 x 3p/16A/C
Fuse for electrical flow heater	A/type	3 x 1p/10A/C
Sound power level according to EN12102 (indoor/outdoor)****	dB(A)	47/68 (+/- 1,5 dB)
****See details on page 5		
	1	1

Indoor unit - Hydrobox :

Aerogor POWER EVI Inverter 15 AS

1

Outdoor unit :

Aerogor POWER EVI Inverter 15 AS

Outdoor unit—description of components:

Type of compressor: OEM Mitsubishi EVI + Carel compressor driv Voltage supply—heat pump: 380-415/50/3 [V/Hz/Ph) Operating range of compressor: 30 - 100 Hz Additional heat exchangerfor EVI function Type of expansion valves: Carel EEV Type of fan: 2 x DC fan with speed control Type fo outdoor unit controller: CAREL Active cooling with 4-way reversible valve

Indoor unit—description of components:

Type of plate heat exchanger: ALFA LAVAL ACH72-32AH-F Type of circulating pump: Grundfos UPM GEO 25-85 180 Energy class of circulating pump: A Safety kit: pressure gauge, air-vent valve, safety valve Dimension of water connectors: DN 25 (bright diameter) Control unit and HMI: TLCD 4827 Touch screen Electrical flow heater: 6 kW (2 kW + 4 kW)

1st stage: 2 kW 2nd stage: 6 kW

Voltage supply –el. flow heater: 380-415/50/3 [V/Hz/Ph) Serial integrated flow switch

Serial attached components:

1x Three-way diverting valve for system with DHW tank

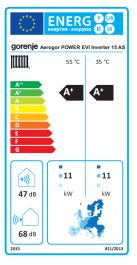

1 x Communication cable 20 m (indoor/outdoor unit)

1 x Set for Wi-fi module

6 x temperature sensors:

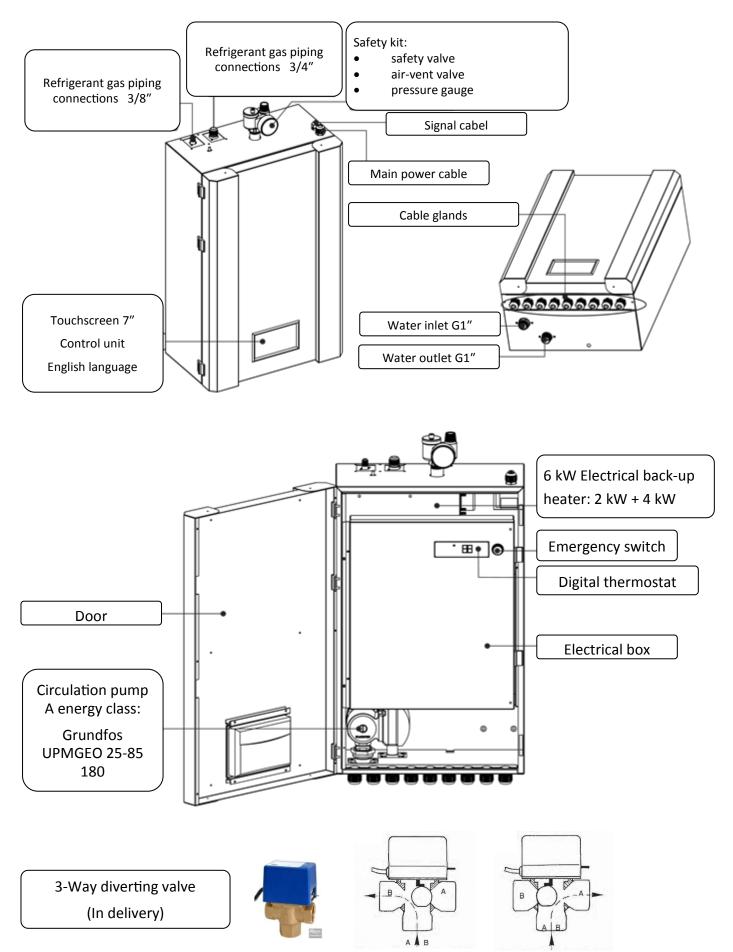

- Room temperature sensor (TR)
- Temp. sensor for outlet water temp. or buffer tank (TC)
- Temp. sensor for DHW tank (TW)
- 2 x temp. sensors for mixing heating circuits (TV1, TV2)
- Additional outdoor ambient sensor (Ta) (enable installation of the Ta sensor on the north part of the house where is minimum influence of the sun)

Position of components

Indoor unit: Aerogor POWER EVI Inverter 15 AS

Article code: 671443/671444 (Outdoor unit/Indoor unit)

Sound power/pressure levels of heat pump air-water Aerogor POWER EVI Inverter 15 AS

	Sound power level Lw(A)	Sound pressure level [dB(A)] on distance*						
Model name		*1 m	*2 m	*4 m	*5 m	*8 m	*10 m	*15 m
Aerogor POWER EVI	68	60,02	54,00	47,98	46,04	41,95	40,02	36,49

According to standard EN 12102. Sound measurement according to EN ISO 3744. Measurement precision (standard deviation in dB): +/- 1,5 dB

DIMENSIONS OF INDOOR AND OUTDOOR UNIT

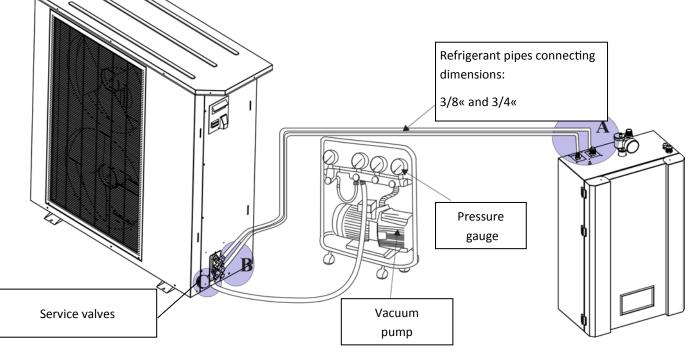

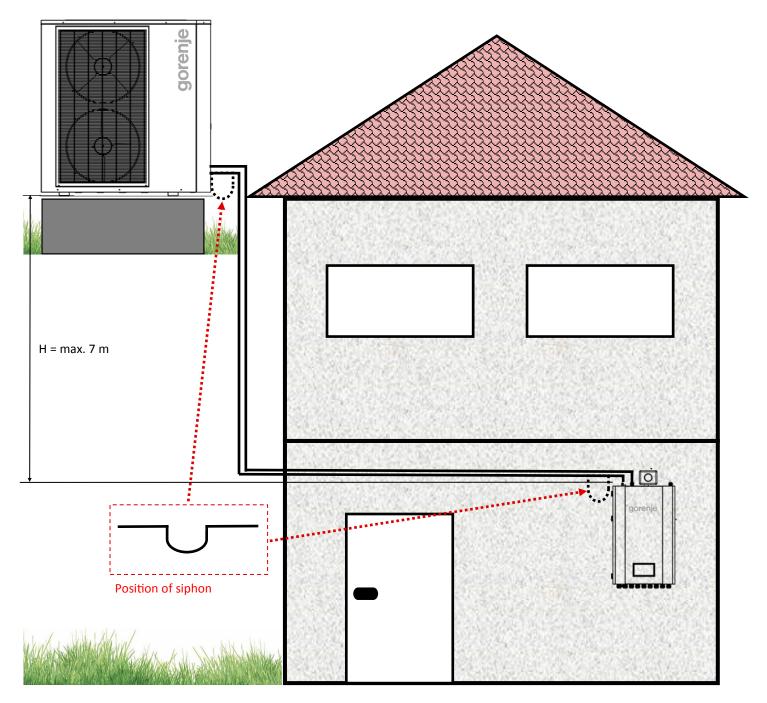

Gas charging for Aerogor POWER EVI Inverter 15 AS

Outdoor unit is pre-charged with **6,0 kg** of refrigerant gas R410A. This volume of refrigerant is enough for a **15 m** long refrigerant pipe connection. **For every additional meter is obligatory to supplement 60 g refrigerant gas in the system**.

For example: If refrigerant pipe system is 20 m long, installer need to add 300 g refrigerant gas in the system: (20 - 15) [m] x 60 [g/m] = 5 [m] x 60 [g/m] = 300 [g] Min. refrigerant pipe lenght: 3 m Maximum pipe lenght between outdoor and indoor unit is 30 meters. If distance is longer it has influence on the COP and heating capacity.

Height difference between outdoor and indoor unit

Outdoor unit is above Indoor unit

Maximum height difference is 7 m.

Totally pipe length distance can be maximum 30 m. In case of 7 m height distance between indoor and outdoor unit, horizontal pipe distance can be maximum 21 m. In that case is obligatory to integrated 2 siphons. Each siphons takes 1 m pipe distance.

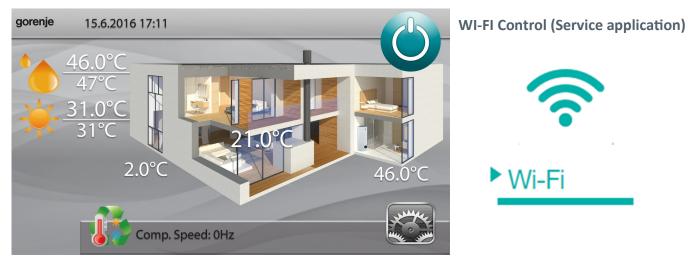

Outdoor unit is below Indoor unit

Maximum height difference is 5 m.

Totally pipe length distance can be maximum 30 m. In case of 5 m height distance between indoor and outdoor unit, horizontal pipe distance can be maximum 25 m.

Aerogor POWER EVI Inverter 15	7 m / 2 siphons	5 m / 0 siphon	

INTELLIGENT ELECTRONIC CONTROL UNIT + VARIABLE SPEED COMPRESSOR

Basic configuration enable regulation of:

2 mixing (proportional 24VDC/0-10V, for example **ESBE ARA 639**)

or 2 direct heating circuits

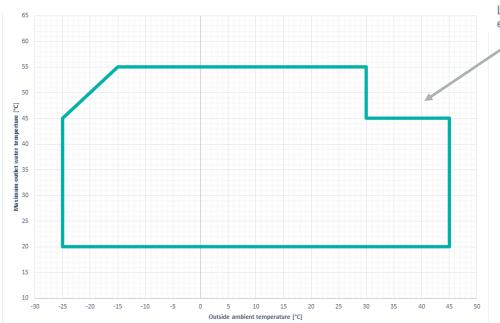

- 3-way diverting valve (for DHW water tank)
- Switching ON/OFF 6 kW electrical flow heater (2 stages working mode)
- Switching ON/OFF bivalent heating source
- Anti legionella function
- Drying (curing) screeds mode
- Sleep function mode—silent mode

REGULATION OF 2 HEATING CIRCUITS

DC Inverter compressor is optimal solution for low and high temperature aplications. ECO mode limitiation enable energy saving during the summer time - it also protect a working envelope of the most important component in heat pump - compressor.

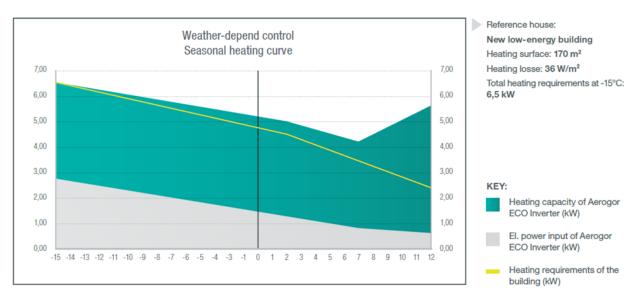

OPERATING RANGE—HEATING MODE: Aerogor POWER EVI Inverter 15 AS

ECO mode:

Limited water temperature for energy saving in summer time.

INTELLIGENT ELECTRONIC CONTROL UNIT + VARIABLE SPEED COMPRESSOR

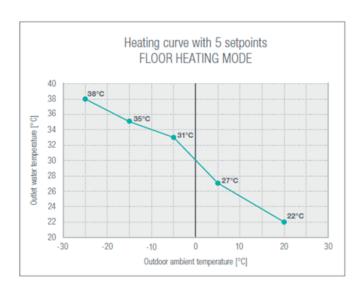

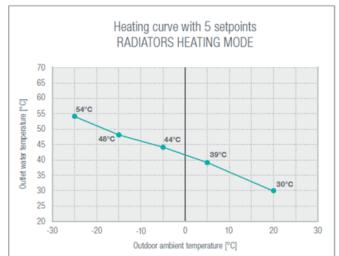

Description of heating curve function: The heating curve generates the flow temperature setpoint, which is used to maintain a certain flow temperature depending on the prevailing weather conditions. The heating curve can be adjusted via a number of settings, thus matching heat output and room temperature to individual needs.

ADJUSTABLE HEATING CURVE

The heating curve depends on the characteristics of the building being heated, which is the only warranty that the heat pump, regardless of the outdoor temperature, will always heat up the water to the lowest acceptable temperature. End user can very easily change or adopt 5 different setpoints of heating curve. The most important are C and D points (outdoor ambient temperature -5°C to 5°C).

	RADIATORS HE	ATING SYSTEMS	FLOOR HEATING SYSTEMS		
	Outdoor temperature	Outlet water temperature of heat pump	Outdoor temperature	Outlet water temperature of heat pump	
Α	-25°C	54	-25	38	
в	-15°C	48	-15	35	
С	-5°C	44	-5	31	
D	5°C	39	5	27	
E	20°C	30	20	22

gorenje

Modern control unit enable not only regulation of heat pump's operation but also some other special functions:

AUTOMATIC OPERATION - HEATING/COOLING/DHW

Heat pump can operate in 3 different modes: Heating/Cooling/ DHW. Intelligent control unit enable automatic switching between:

- heating and cooling mode
- heating and DHW mode
- cooling and DHW mode

SLEEP FUNCTION - SILENT OPERATION MODE

In this mode HEAT PUMP adjusts outlet water temperature or room temperature to save energy and lowers the operation noise by reducing the working speed of the compressor and fan motor for optimum sleeping comfort.

REDUCED SETPOINT - HOLIDAYS MODE

Serial integrated Vacation Mode allows the users to set the system to operate under minimized vacation settings between the programmed starting and ending time of their vacation periods. System will switch back to normal mode at the ending time of vacation mode properly, so that the occupants will be welcome with proper heating temperature and sanitary hot water, upon returning from their vacations.

ROOM TEMPERATURE COMPENSATION FUNCTION

When the water temperature control function is utilized, users can still connect the room temperature sensor (serial integrated) to allow the intelligent control unit to adjust the outlet water temperature automatically based on the difference between the desired room temperature and the actual room temperature measured.

DHW STORAGE FUNCTION

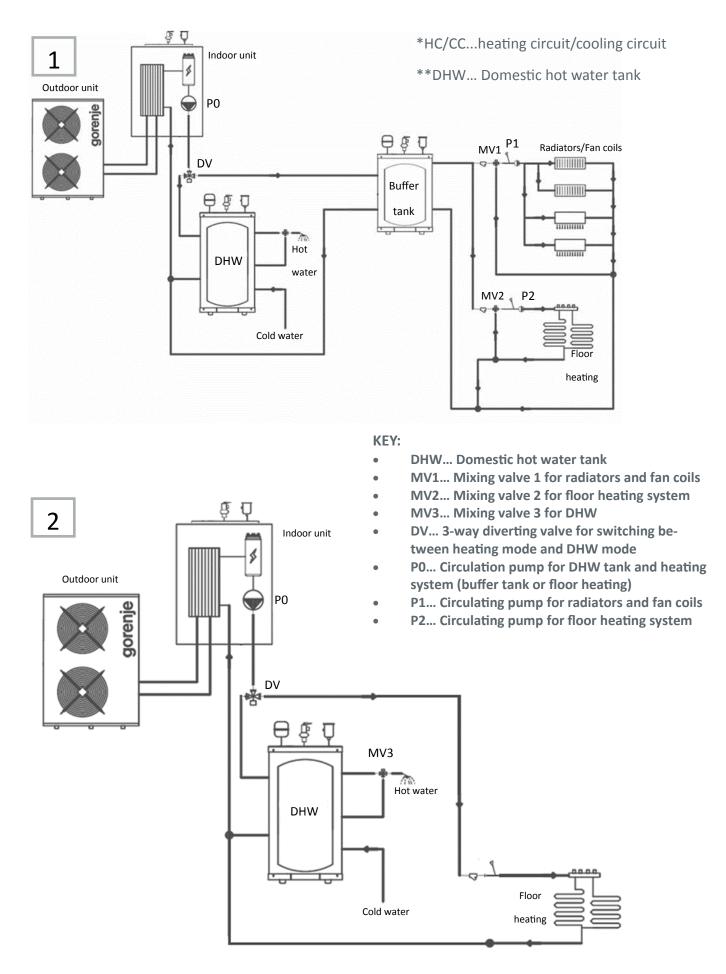

This function enables time setting of DHW mode for 7 days per week and 365 days per year. For example: heat pump heat up the sanitary hot water on the morning time between 5.00 - 7.00 and on the afternoon/evening time between 15.00 - 23.00. It enable energy saving and lower costs on an anual level.

Components for long life time and better efficiency

Magnetic dirt separator

Multifunction device with dirt separator and strainer. Specific for the complete cleaning of the hydraulic circuit, to protect continuously generator and components. Main features of dirt separator:

- \Rightarrow enable desired water flow in the system
- ⇒ Optimum water flow enable declarated heating capacity and COP of heat pump
- \Rightarrow Enable long life time of heat pump

Position in the installation system:

GORENJE D.D.
